SeoYeon Kim

yeonkim112599@gmail.com | London, UK | Linkedin | GitHub | Portfolio

Profile Summary

- MSc Data Science graduate with experience as a Data Scientist in a UK insurance company and 2+ years at a digital therapeutics startup.
- **Right to work in the UK: NO VISA SPONSORSHIP REQUIRED.**

Education

University of Bristol — Bristol, United Kingdom
Master of Science, Major in Data Science (average mark: 76%, Distinction) — *Sep 2025 – Oct 2026*

Yonsei University — Seoul, Korea
Bachelor of Science in Engineering. Double Majors: Bio-Convergence and Engineering; Electrical and Electronic Engineering — *Mar 2018 – Aug 2024*

Professional Experience

Allianz UK — Bristol, United Kingdom
Data Scientist, Claims Operations Department, Full-time, Internship — *June – Oct 2026*

- Quantified a self-fulfilling prophecy loop in a production ML model (causal inference), reducing the loop signature by 52%.
- Built a four-layer Python framework with a SHAP-based loop-severity estimator for the production ML system.

180 Degrees Consulting — Bristol, United Kingdom
Data Scientist, Grapple Law Project, Contract — *Feb – Apr 2026*

- Built an n8n pipeline segmenting users by an 11-level case hierarchy and sending LLM-personalised retention emails.
- Identified three factors linked to settlement offers; surfaced 31 nudges and implemented 3 n8n workflows.

WELT Corporation — Seoul, Korea
Software Engineer, Development Department, Full Time — *Apr 2024 – Jul 2025*

- *TypeScript Backend Development | Digital Therapeutic (DTx) for Insomnia (Germany, Medical Device Class IIa)*
  - Architected and deployed the backend in 3 months, launching in August 2025 with zero errors in user testing.
  - Implemented CQRS and event-driven architecture in a monorepo, with Terraform, Docker and CI/CD on GCP.
- *TypeScript Backend Development | AI-Powered Healthcare Chatbot*
  - Prototyped a LangGraph-based Slack AI chatbot with role-based access control for prescription code generation.
- *Python Backend Development & MLOps | Automated Sleep Pattern Prediction Service*
  - Owned an automated ML pipeline (Random Forest Regression) predicting sleep patterns from iOS HealthKit data.
  - Managed an 8-week project lifecycle and presented findings to 18 stakeholders across teams.
- *iOS Development | On-Device AI Sleep Prediction Application*
  - Developed an on-device AI sleep prediction application using Random Forest Regression in CoreML.
  - Presented ML concepts to 6 clinical staff, including the CMO, to shape AI feature requirements.

Software Engineer Intern, Development Department, Full Time — *Sep 2023 – Mar 2024*

- Redesigned the DTx backend as an AI agentic system with 34 features; presented it to 30+ stakeholders.

Regulatory Affairs Intern, Clinical Department, Full Time — *Jun – Aug 2023*

- Drafted Software Architecture and Detail Design documents for Class IIa Software as Medical Device.

Relevant Projects

- **London AI×Bio Hackathon 2026:** Placed 2nd of 15 teams with an agentic workflow (GPT-Rosalind, NVIDIA BioNeMo) for herbicide-resistance mutations.
- **Allianz UK × Barnardo's Hackathon 2026:** 1 of 2 winning teams out of 6; clustered donors with K-Means and recommended retention actions.
- **Wise × HuddleHive Hackathon 2026:** Built and deployed AdLens, an undisclosed-advertisement detector (DistilBERT, FastAPI).
- **Lloyds × UoB Datathon 2026:** Benchmarked 11 ML models for fraud detection with a performance-vs-carbon leaderboard.
- **MSc projects:** serverless AWS image processing (processing time cut by 76%); DeepAR/TFT calibration with EnbPI; image-to-sentence retrieval; decision dashboard (Tableau).

Laboratory Experience & Academic Activities

- **Yonsei University**: Team Leader of Precision Medicine (IBS CNM & NanoBME); conductive hydrogel research (BLISS lab); 3D QSAR literature review (Medicinal Food Engineering Lab).

Skills

- **Languages & Tools**: Python, SQL, TypeScript; Tableau, Jira, GitHub
- **Machine Learning & Analytics**: scikit-learn, pandas, XGBoost, SHAP, CoreML, LangGraph, DistilBERT, K-Means, UMAP
- **Cloud & MLOps**: AWS (Lambda, SageMaker, S3, SQS), GCP (Cloud Run), Terraform, Docker, GitHub CI/CD, uv
- **Data & Backend**: PostgreSQL, Supabase, Redis, Prisma, FastAPI, Next.js, n8n, SendGrid
