Right to work in the UK: no visa sponsorship required.

MSc Data Science graduate with experience as a Data Scientist in a UK insurance company and 2+ years at a digital therapeutics startup.

EDUCATION

University of Bristol, *MSc Data Science (Sep 2025 – Oct 2026)* Average mark 76% (Distinction)

Yonsei University, *BSc in Engineering, double major in Bio-Convergence and Engineering and in Electrical and Electronic Engineering (Mar 2018 – Aug 2024)*

EXPERIENCE

Allianz UK, *Data Scientist (Internship), Claims Operations, Bristol (Jun – Oct 2026)*

- Quantified a self-fulfilling prophecy loop in a production total-loss ML model with a regression discontinuity-style comparison, reducing the loop signature by 52% while precision rose from 98.52% to 98.89%.
- Built a four-layer Python framework (Strategy pattern, SHAP-based loop-severity estimator) applicable to the team's production ML system.

180 Degrees Consulting, *Data Scientist, Grapple Law project, Bristol (Feb – Apr 2026)*

- Built an n8n pipeline that segments users by an 11-level case progression hierarchy and triggers LLM-personalised retention emails through SendGrid.
- Identified three factors linked to settlement offers with statistical tests; surfaced 31 nudges and implemented 3 n8n workflows.

WELT Corporation, *Software Engineer, Seoul (Apr 2024 – Jul 2025)*

TypeScript backend: Digital Therapeutic (DTx) for Insomnia (Germany, Medical Device Class IIa)

- Architected and deployed the backend in 3 months, launching in Aug 2025 with zero errors in user testing.
- Implemented CQRS and event-driven architecture in a monorepo, with Terraform, Docker and CI/CD on Google Cloud.

TypeScript backend: AI-powered healthcare chatbot

- Prototyped a LangGraph-based Slack AI chatbot with role-based access control to automate prescription code generation.

Python backend and MLOps: automated sleep pattern prediction service

- Owned an automated ML pipeline (Random Forest Regression) predicting sleep patterns from iOS HealthKit data.
- Managed an 8-week project lifecycle and presented findings to 18 stakeholders across Development, Clinical and Product.

iOS: on-device AI sleep prediction application

- Developed an on-device AI sleep prediction application using Random Forest Regression in CoreML.
- Presented ML concepts to 6 clinical staff, including the Chief Medical Officer, to shape AI feature requirements.

WELT Corporation, *Software Engineer Intern (Sep 2023 – Mar 2024) and Regulatory Affairs Intern (Jun – Aug 2023)*

- Redesigned the DTx backend logic as a context-flow-based AI agentic system with 34 features; presented it to 30+ stakeholders.
- Drafted Software Architecture and Detail Design documents for a Class IIa Software as Medical Device.

HACKATHONS & PROJECTS

- **London AI×Bio Hackathon 2026, 2nd of 15 teams:** agentic workflow (GPT-Rosalind, NVIDIA BioNeMo, DiffDock, OpenFold) to find minimal point mutations conferring herbicide resistance.
- **Allianz UK × Barnardo's Hackathon 2026, 1 of 2 winning teams:** K-Means donor clustering and retention actions.
- **Wise × HuddleHive Hackathon 2026:** AdLens, an undisclosed-advertisement detector (fine-tuned DistilBERT, FastAPI/Next.js).
- **Lloyds × UoB Datathon 2026:** benchmarked 11 ML models for fraud detection with a performance-vs-carbon leaderboard.
- **Headstart Global Launchpad EMEA 2026:** led the Lumenia team's B2B mental health pitch within six days.

RESEARCH

- **MSc projects:** serverless AI image processing on AWS (processing time for 120 files cut by 76%); calibration of DeepAR and TFT forecasts with EnbPI; image-to-sentence retrieval via CNN embeddings; migrant integration dashboard (Tableau).
- **Yonsei University:** precision medicine team leader (IBS CNM & NanoBME); conductive hydrogel research (BLISS lab); 3D QSAR drug discovery thesis (Medicinal Food Engineering Lab).

SKILLS & AWARDS

Languages: Python, SQL, TypeScript **ML:** scikit-learn, pandas, XGBoost, SHAP, CoreML, LangGraph, DistilBERT
Cloud and MLOps: AWS (Lambda, SageMaker, S3, SQS), GCP (Cloud Run), Terraform, Docker, GitHub CI/CD, uv
Data and backend: PostgreSQL, Supabase, Redis, Prisma, FastAPI, Next.js, n8n **Tools:** Tableau, Jira, GitHub
Awards: PLUS Award, University of Bristol (Mar 2026); Certificate of Advanced Data Analytics Professional, Korea Data Agency (Nov 2023)
